Create a new gitHub repository

Clone the repo into your computer

CLI=> *git clone [url]*

Initialize a new npm project

CLI=> *npm init -y*

Install JEST

CLI=> *npm i jest*

Push initial commit

1 MainHelper

To run MainHelper test suite you can use:

CLI=> *npm run helper*

```
"helper": "jest MainHelper/MainHelper.test.js --coverage"
```

1.1 getRandomBetween()

This method can be invoked without any parameters (method will use default values) or with custom values.

This method returns a pseudo random number that in [min, max] – default values [0, 9]

```
getRandomBetween = (min = 0, max = 9) => Math.floor(min + Math.random() * (max - min + 1))
```
